

## Threading solutions Europe

Your experience & our know-how: the best tools for your machining needs

## FRANÇAIS

Xactform SA est l'un des principaux fabricants suisses d'outils de coupe en métal dur. Spécialisé dans le filetage par usinage, il propose autant des gammes standards que la réalisation d'outillage sur mesure.

Pionnier de ce domaine spécifique, son savoir-faire lui permet de proposer des outils de la meilleure qualité pour toutes les applications de filetage, à même de répondre aux plus hautes exigences techniques et économiques sur les cinq continents.

## DEUTSCH

Xactform AG ist einer der wichtigsten Hersteller von Werkzeugen aus Hartmetall für das Gewindefräsen. Es werden sowohl Standardprodukte wie Werkzeuge für spezifische Anwendungen offeriert.

Als Pionier im Bereich des Gewindefräsen und den langjährigen Erfahrungen ist Xactform AG in der Lage, qualitativ hochstehende Produkte zu konkurrenzfähigen Preisen in allen fünf Kontinenten dieser Welt anzubieten.

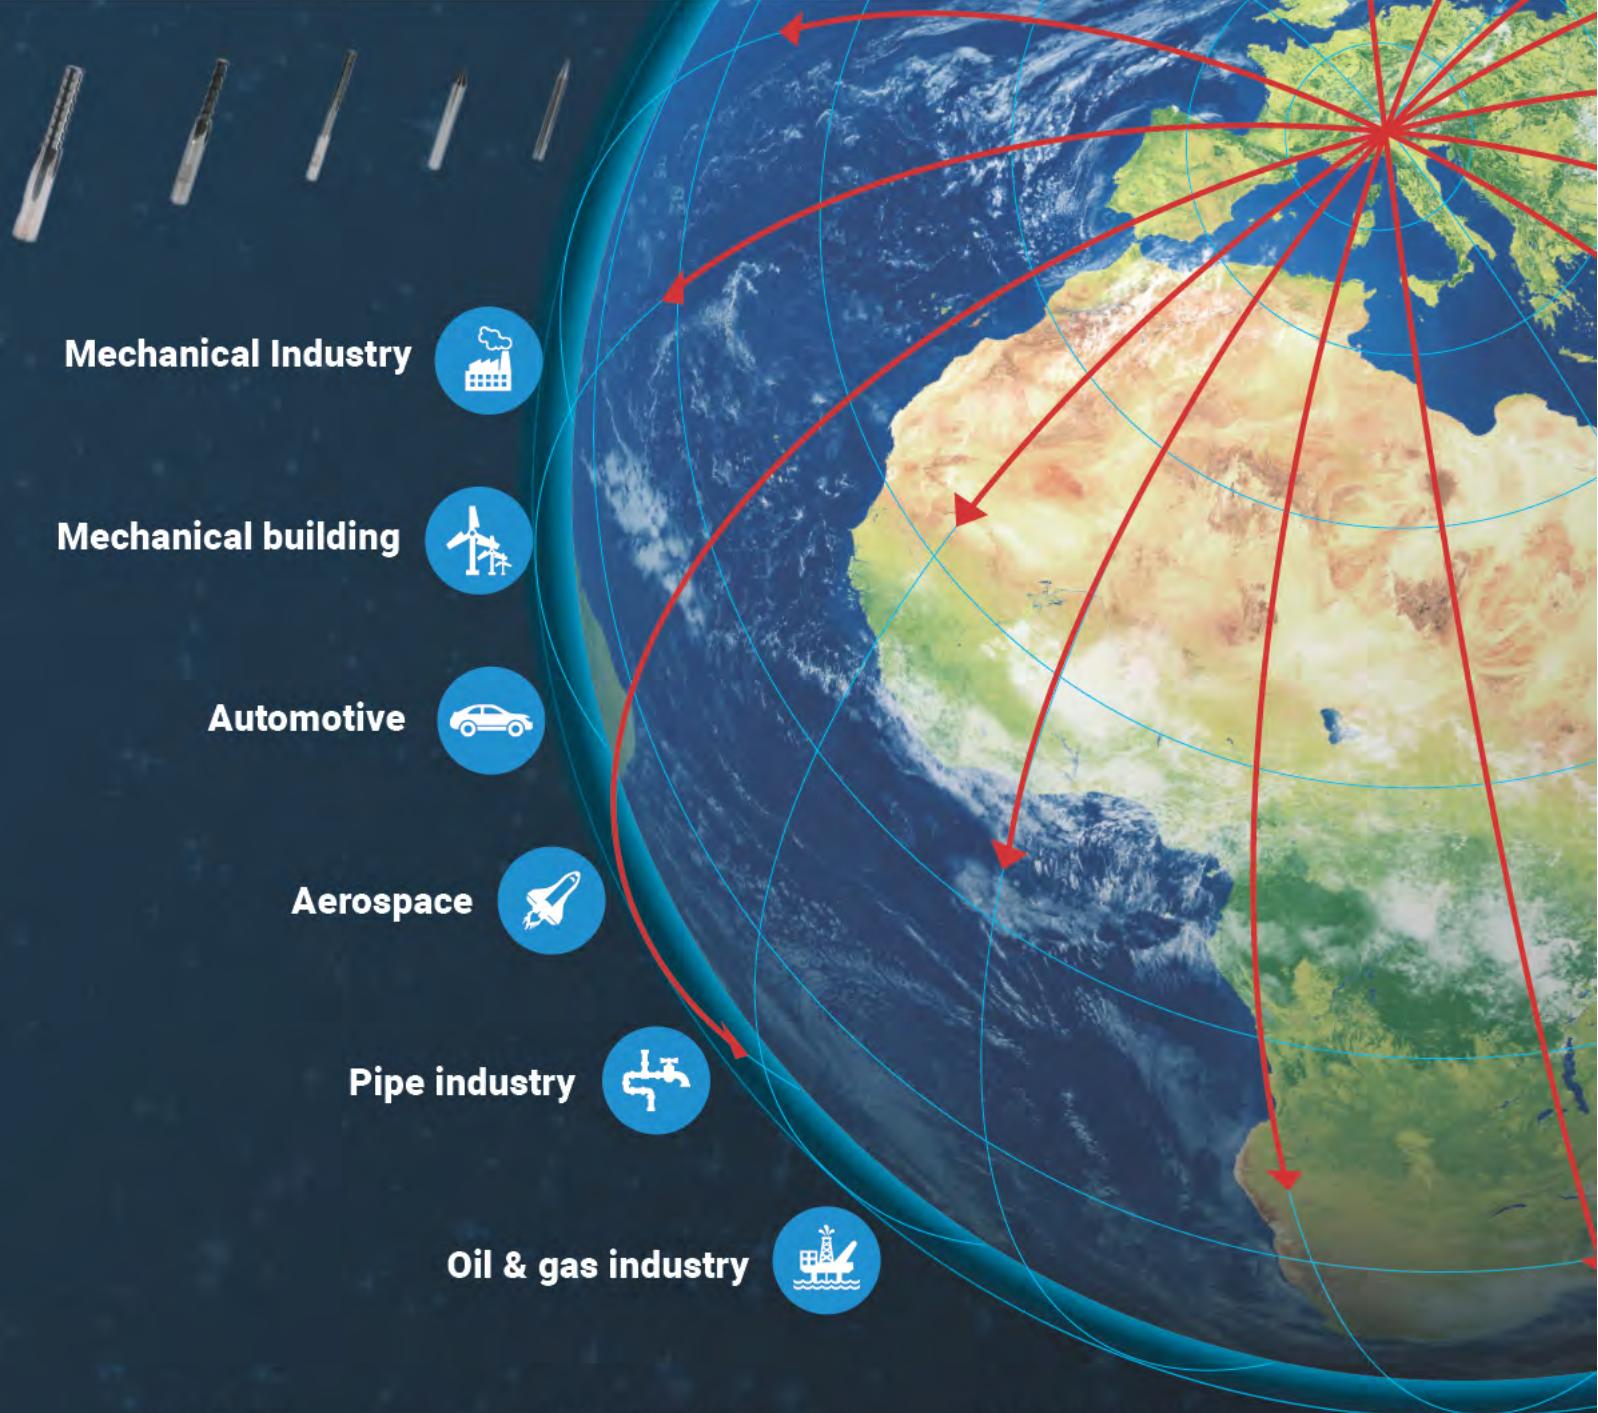

## ENGLISH

Xactform SA is one of the most important Swiss manufacturers of solid carbide threading tools. Specialists in threading by machining, we offer as many standard ranges as in the production of tools made to measure.

Pioneers in this specific field, our know-how allows us to propose tools of the best quality for all applications in threading, and we are able to answer to the highest technical and economic requirements on five continents.

### FRANÇAIS

Le filetage par usinage augmente vitesse et productivité en offrant des avantages importants: réduction de longueur ou de section, miniaturisation, usinage de parois minces, etc. Autant de bonnes raisons de l'adopter!

### DEUTSCH

Die Herstellung von Gewinden mittels Gewindefräsen, erlaubt es die Produktivität des Prozesses massiv zu erhöhen und eine optimale Qualität zu erzeugen. Gute Gründe, diese Technologie anzuwenden!

### ENGLISH

Threading by machining increases speed and productivity and offers important advantages: length or section reduction, miniaturization, machining of thin walls, etc. A few of many good reasons to adopt it!

**Avantages - Vorteile - Advantages****Avantages techniques et économique du filetage par fraisage****Techniques**

- Profondeur de perçage réduite: le filetage va jusqu'au fond du trou.
- Coupes interrompues: elles ne posent aucun problème.
- Gorges de filetage: elles ne sont plus nécessaires au voisinage d'un épaulement ou dans un trou borgne.
- Entrées multiples: elles sont faciles à exécuter dans la meilleure précision.
- Précision de positionnement: elle peut être ajustée indépendamment du pré-perçage.
- Hauteur de filet: augmentée, elle produit une meilleure répartition des contraintes et permet une résistance supérieure.
- Puissance de broche nécessaire à l'usinage: elle est très largement réduite, même pour les grands diamètres.
- Copeaux: très petits, ils s'éliminent facilement et diminuent sensiblement les risques de bourrage.

**Economiques**

- Usinage plus court: réalisé en une seule passe, le temps de filetage peut souvent être réduit par 5 ou plus par rapport au taraudage (gain de productivité).
- Usinage réduit: la profondeur de pré-perçage est réduite puisque le filetage va jusqu'au fond du perçage. Pour les filetages coniques, un perçage cylindrique suffit.
- Etat de surface parfait: les opérations d'ébavurage ne sont plus nécessaires.
- Diminution du parc d'outils et gain de productivité (diminution des changements d'outils): les filetages de même pas mais de diamètres différents sont usinés avec le même outil, comme les filets à gauche ou à droite et parfois les filetages extérieurs et intérieurs.
- Casse d'un outil: rare, si elle survient toutefois, aucun dispositif d'extraction n'est nécessaire. Le nouvel outil peut directement intervenir.

**Technische und wirtschaftliche Vorteile des GewindefräSENS****Technische Vorteile**

- Bohrtiefe reduziert: das Gewinde geht bis auf den Grund der Bohrung.
- Unterbrechung des Fräsprozesses: kein Problem.
- Gewindegänge: sie sind in der Nachbarschaft einer Schulter oder bei einer Sackbohrung nicht notwendig.
- Mehrfacheintritte: sie sind leicht mit absoluter Präzision zu realisieren.
- Höhe des Gewindeganges: wird erhöht und erlaubt eine bessere Verteilung der Wiederstände und eine höhere Festigkeit.
- Notwendige Kraft der Fräsmaschine bei der Bearbeitung: sie wird sehr stark reduziert, auch bei grossen Durchmessern.
- Späne: sie sind sehr klein und lassen sich leicht entfernen und vermindern das Risiko einer Verstopfung.

**Wirtschaftliche Vorteile**

- Kürzere Bearbeitungszeit: nur ein Umgang, die Zeit zur Herstellung des Gewindes kann im Vergleich mit dem herkömmlichen Gewindeschneiden bis zu fünfmal oder mehr reduziert werden (Produktivitätsgewinn).
- Reduktion der Bearbeitung: da das Gewinde bis auf den Grund der Bohrung geht, kann die Bohrtiefe reduziert werden. Für konische Gewinde genügt eine zylindrische Bohrung.
- Perfekte Gewindestruktur: das Entfernen der Späne fällt weg.
- Verminderung der Anzahl Werkzeuge und Produktivitätsgewinn (Weniger Werkzeugwechsel): Gewinde mit gleicher Steigung jedoch mit verschiedenen Durchmessern können mit dem gleichen Gewindefräser erstellt werden. Dies gilt auch für Rechts- respektive Linksgewinde.
- Werkzeugbruch: kommt sehr selten vor und wen es passiert, fällt das defekte Werkzeug durch das Bohrloch und das neue Werkzeug kann eingesetzt werden. Wichtig: das Werkstück kommt nicht zu schaden.

**Technical and economical advantages of thread milling****Technical advantages**

- Reducing drilling depth: full thread form close to depth in blind hole application.
- Interrupted cutting: there is no problem.
- Grooves close to a shoulder and near to depth in blind hole can be eliminated.
- Multiple starts: easy to machine with best accuracy.
- Centerline of the drilled hole can be adjusted with the threadmill.
- Thread height: with 100% of the thread form, it produce better constrained assessment and higher resistances.
- Minimal horsepower requirements, even with coarse pitch threads.
- Chips: smaller, they are easy to evacuate and there is less chips ramming in the hole.

**Economic advantages**

- Shorter machining times: in one pass, the threadmilling operation can be 5 times shorter compare to tap (cost saving).
- Shorter machining times: because of the threadmilling positioning, the hole can be drilled less deeper. For tapered threading, straight drilling hole is enough.
- Superior flank finish: no deburring operation.
- Cost saving, less tools: left or right hand threads, external or internal threads in particular norm, can be produced with the same tool.
- Tool brake: it's very rare but if it happen, no extracting tool needed. New tool can operate straight away.

## Matières - Werkstoffe - Material

**Outils standard**

Nuance micro-grain avec une excellente résistance aux chocs et à la flexion, pour les plus larges applications.

**Fraises à fileter diamètre ≤ 3 mm**

Nuance micro-grain ultrafin pour une téna-cité et une élasticité améliorées.

**Nuance spéciale céramique - métal** pour applications spécifiques (plaquettes triangulaires 3/8") sur demande.

Plaquettes pour finition et petit profil (usinage à grande vitesse).

**Traitement d'arrêtes**

Sur demande pour les profils avec pas dès 1.50 mm, possibilité de traitement d'arrêtes.

**Standard-Werkzeuge**

*Feinstkornsorten mit einem exzellenten Widerstand gegen Shocks und Verbiegungen für eine grosse Anzahl von Anwendungen.*

**Gewindeschneider Diameter ≤ 3 mm**

*Ultrafeinkornsorten für bessere Widerstand und Elastizität.*

**Spezialarten Keramik-Metall** für Spezial-anwendungen (Gewindedrehplatte 3/8") auf Anfrage.

*Abschlussplatte mit kleinem Profil für eine Verarbeitung mit grosser Geschwindigkeit.*

**Facettieren der Gewindedrehplattensitze**

*Auf Anfrage, möglichkeit für Profile mit einer Steigung von 1,50 mm eine Behandlung der Gewindedrehplattenspitze zu realisieren.*

**Standard tools**

For a wide range of applications the micro-grain grade has excellent resistance to shocks and bending.

**Threadmill diameter ≤ 3 mm**

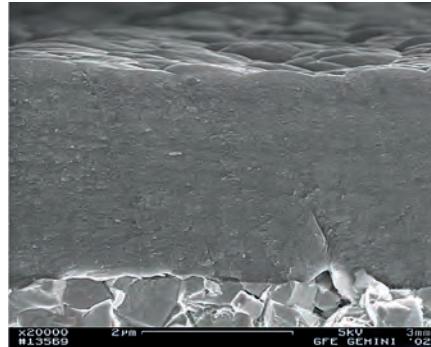

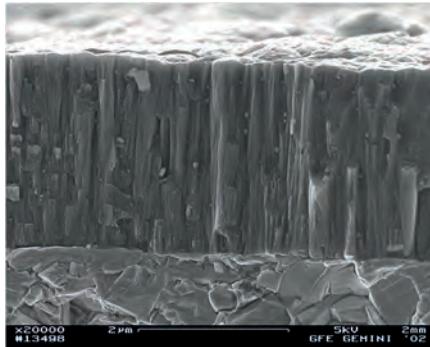

Ultra-fine micro-grain grade for improved tenacity and elasticity.

**Upon request for specific applications, special grades ceramic – metal**, triangular inserts 3/8". Finishing inserts and small profiles for high-speed machining.

**Honing treatments**

Upon request for pitches of 1.50 mm, honing of tool edges.

T3 = Triple pas (une dent sur trois)

L = Longueur total

L1 = Longueur utile

D = Diamètre de queue

D1 = Diamètre utile

NF = Nombre de dents

Z = Nombre de gouges

H = Hauteur de profil

WCH = Disponible avec arrosage central

WCG = Disponible avec rainures d'arrosage

HA = Cylindrique lisse

HB = Weldon 6535-HB

HE = Weldon 6535-HE

T3 = Dreigängig (ein Zahn auf drei)

L = Gesamtlänge

L1 = Gewindelänge

D = Schaftdurchmesser

D1 = Fräsdurchmesser

NF = Anzahl Zähne

Z = Anzahl Nuten

H = Profilhöhe

WCH = Verfügbar mit Innenkühlung

WCG = Verfügbar mit Kühlnuten

HA = Zylinderschaft

HB = Spannfläche 6535-HB

HE = Spannfläche 6535-HE

T3 = Triple pitch (one tooth on three)

L = Overall length

L1 = Length of thread

D = Shank diameter

D1 = Cutter diameter

NF = Number of teeth

Z = Number of flutes

H = Height of profile

WCH = Available with coolant hole

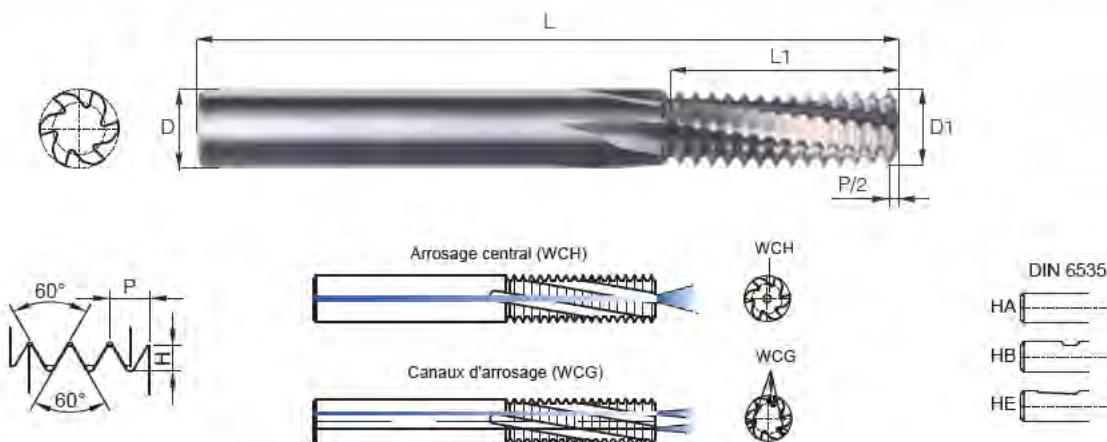

WCG = Available with coolant grooves

HA = Plain cylindrical shanks

HB = Weldon 6535-HB

HE = Weldon 6535-HE

 $L$  = Longueur total $L_1$  = Longueur utile $D$  = Diamètre de queue $D_1$  = Diamètre utile

NF = Nombre de dents

Z = Nombre de gouges

H = Hauteur de profil

WCH = Disponible avec arrosage central

WCG = Disponible avec rainures d'arrosage

HA = Cylindrique lisse

HB = Weldon 6535-HB

HE = Weldon 6535-HE

 $L$  = Gesamtlänge $L_1$  = Gewindelänge $D$  = Schaftdurchmesser $D_1$  = Fräsdurchmesser

NF = Anzahl Zähne

Z = Anzahl Nuten

H = Profilhöhe

WCH = Verfügbar mit Innenkühlung

WCG = Verfügbar mit Kühlnuten

HA = Zylinderschaft

HB = Spannfläche 6535-HB

HE = Spannfläche 6535-HE

 $L$  = Overall length $L_1$  = Length of thread $D$  = Shank diameter $D_1$  = Cutter diameter

NF = Number of teeth

Z = Number of flutes

H = Height of profile

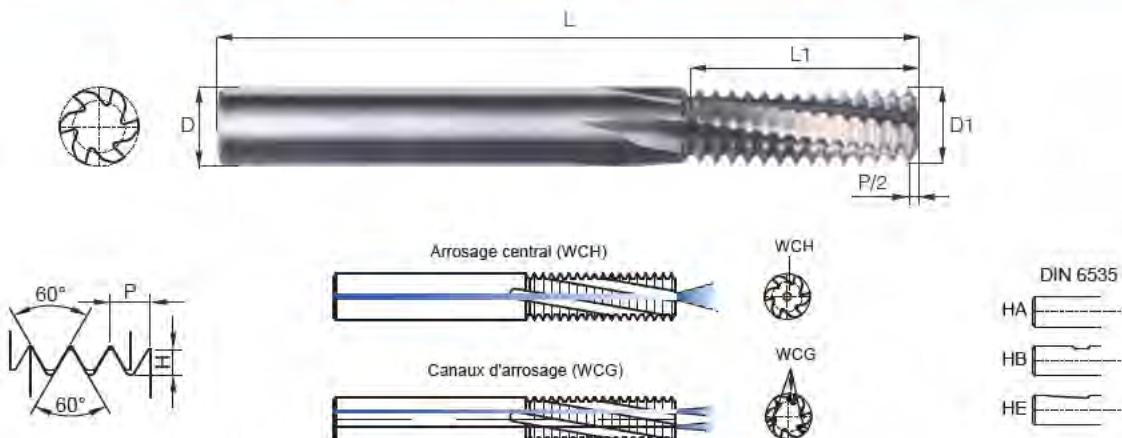

WCH = Available with coolant hole

WCG = Available with coolant grooves

HA = Plain cylindrical shanks

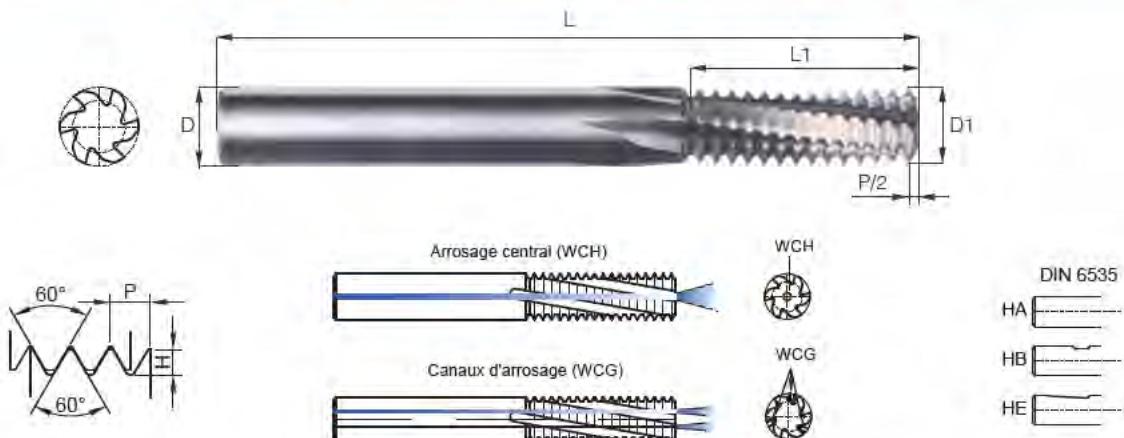

HB = Weldon 6535-HB

HE = Weldon 6535-HE

L = Longueur total de plaquette

T = Hauteur de la plaquette

NF = Nombre de dents

C = Centrage

HP = Hauteur de profil

S = Un seul côté de travail

SXP= Un seul côté de travail avec dégagement

H = Hauteur de la pointe

a = Angle de coupe

b = Angle d'inclinaison

L = Plattenlänge

T = Plattenhöhe

NF = Anzahl Zähne

C = Zentrierung

HP = Profilhöhe

S = Einseitig verwendbar

SXP= Einseitig verwendbar mit Freischliff

H = Spitzenhöhe

a = Schnittwinkel

b = Neigungswinkel

L = Insert length

T = Height of Insert

NF = Number of teeth

C = Centring

HP = Height of profile

S = Single side use only

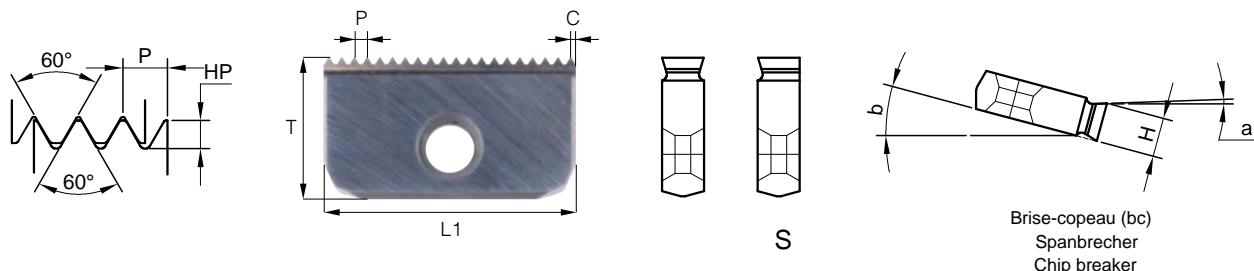

SXP= Single side use only with clearance angle

H = Height of centres

a = Cutting angle

b = Angle of inclination
